Last Revision:

Children with special health needs are being represented in increasing numbers in classrooms across the state. Existing legal requirements mandate that all children be allowed access to an educational opportunity, regardless of disabling condition. State of Tennessee legislation (TCA49-5415) addresses health care procedures, which may be required during school hours and related events and necessary to provide the student access to the educational program.

Additional information can be found in the Tennessee State Board of Education Policy Manual Section 4.205.
